S T A T E O P E R A T I O N S

A comparison - August 1940 to July 1940 and August 1939

August Payments Set All-Time High

Topping the previous high of \$732,542.54 (set in September 1939) by \$175,010.30, August benefit payments reached the highest total yet experienced during Florida's nineteen months of unemployment compensation payments. The total of benefit payments was \$907,552.34, which amount was disbursed by the issuance of 93,738 checks. The payment amount constituted an increase of 24.7% over the July figure and exceeded the August 1939 total by 57.9%.

Claims Received Fluctuate Markedly

Indicative of a decrease in benefit payments during future months of 1940 was the 58.1% drop in the number of initial claims filed during August. In keeping with the large number and amount of payments made during August was the 13.8% rise in the number of continued claims during that month. Reflecting the drop in the number of initial claims filed was the 52.6% drop in waiting period claims. The August total of claims received amounted to 111,446, a drop of 13.9% and 11.8% from the July 1940 and August 1939 figures, respectively.

Agent State Claims Decrease 15%

The number of agent state claims received decreased in all categories as initial claims fell 19.5%, continued claims fell 14.6% and the total number fell 15.1%. Although the decrease over July was evident, an increase over the total number filed during August 1939 of 85.9% was made.

Liable State Claims Decrease 10.2%

In keeping with the general lessening of the claim load was the decrease in initial, continued and total liable state claims. As in other claim loads (see Claims Received and Agent State Claims) the heavier decrease was found in the initial claims group - 45.9% in the case of liable state claims. Much smaller was the 2.7% decrease shown by liable state continued claims. The August total showed a decrease of 3.8% from the August 1939 number.

Initial Determinations Fall 51.8%

Attendant on the large decrease in the number of initial claims received was the sharp drop in the number of initial determinations made during August. The number of initial determinations finding the claimant eligible fell from 12,059 in July to 5,573 in August - a fall of 53.8%. The number of initial determinations finding the claimant not eligible decreased from 9,891 to 5,014 - a decrease of 49.1%. The total number of initial determinations decreased from 21,950 to 10,587 to show a drop of 51.8%. This was a drop of 43.8% from the August 1939 total.

Field Visits Rise 14.2%

With the lessening of the claim load in the local offices affording more time to the personnel for placement activities came an increase from 549 field visits in July to 627 in August. This constituted a rise of 14.2% over the July figure but a decrease of 52.5% from the month of August 1939.

New Applications Decrease 8.6%

The number of new applications filed during August totaled 9,087, a drop of 8.6% from the 9,940 filed during July. The decrease from the August 1939 figure was slightly greater - 10.4%.

Renewals Drop 30.6%

The 6,577 applicants who caused their applications to be renewed during August lacked 30.6% of equaling the 9,482 employing this means of having their applications placed in the active file during July. This change really represented a return to the normal figure after the increased activity attendant on the peak month of July.

Active File Drops Nearly 11,000

With the decrease in the number of applications and renewals, increases in placements and an unusually large number of cancellations, the active file dropped from 77,992 in July to 66,344 in August - a drop of 14.9%. However, the August 1940 figure was higher by 1.6% than that of the same month of 1939.

Employer Orders Increase 14.7%

Employer orders during the month totaled 2,283 to show an increase of 14.7% over the 1,991 received during July.

Placements Jump 37.7%

With a 14.7% rise in the number of employer orders there was also a 37.7% increase in the number of placements. This would indicate a rise in the number of workers per employer order during August over that of July. August placements exceeded July placements as the total for the former month reached 3,548 and the latter totaled 2,576. August placements increased 20.5% over the same month of 1939.

Claimant Placements Increase Greatly

Although employer orders increased 14.7% and total placements increased 37.7%, claimant placements increased 135% (from 399 to 938). The August 1940 total increased over the August 1939 figure by 29.2%.

Veteran Placements Increase 28.9%

The 116 veterans placed in employment during August equaled a percentage increase of 28.9 over the July figure. This was also an increase of 50.6% over the August 1939 total.

Agricultural Placements Increase

The number of placements in agricultural activities during August (99) constituted a rise of 82 over the 17 placements in that category during July.

BENEFIT PAYMENTS

August Payments Top Previous High by \$175,010.30

Benefit payments continued their month to month increase reaching not only a peak for 1940 but also for the entire 19 month period of benefit payment operations. Payments during August totaled \$907,552.84 to bring the total payments during 1940 to \$4,138,338.63 and the total during the 19 months to \$7,642,451.08.

Citrus Areas Account for Large Percentage of Payments

Local office areas which include major citrus producing sections (Arcadia, Fort Pierce, Lakeland, Orlando and Winter Haven) accounted for 39%(\$353,866.40) of the State total of payments. The Winter Haven area received \$118,856.90 to lead the State; claimants in the Orlando area received \$105,027.50; Miami, the only one of the three metropolitan areas in the State to remain among the leaders in the amount of benefit payments, accounted for \$101,700.00. Jacksonville and Tampa, two of Florida's largest cities and leaders in industrial enterprises, accounted for \$69,515.00 and \$72,265.00, respectively.

Average Check Shows Increase Over Previous Month

The amount of the average check issued during August rose \$.15 from \$9.53 to \$9.68, the highest yet experienced. This means that of all the checks issued during August, none of which could exceed \$15.00, the average was \$9.68. The average check for the first month during which benefit payments were made, February 1939, was \$6.88 or \$2.80 less than the average for the month of August 1940.

In considering the average check it must be remembered that this average is computed on the basis of the total number of checks issued and the total amount of benefits paid out. In August 7.88% of the amount of benefit payments were of types other than regular or payments for total unemployment. As shown in the table at the top of page 5, partial payments (payments made to workers who are partially employed but not to the extent of earning as much as their weekly benefit amount) accounted for 6.67% of the amount of payments while irregular payments (payments made to workers whose balance is less than their weekly benefit amount) comprised 1.21% of the total. For the claimants who received unemployment compensation for total unemployment the average payment amounted to \$10.08. The inclusion of the two other types of payments brought the average to \$9.68 as shown at the bottom of the small table.

NOTE: Due to administrative changes the local office at Lake City has been combined with the Tallahassee office and the Fort Myers office has been combined with the Arcadia office. Tables showing local office distribution of payments, claims, placements, etc., in this issue do not include either Lake City or Fort Myers.

ANALYSIS OF BENEFIT CHECKS ISSUED DURING MONTH OF AUGUST 1940
BY TYPE OF PAYMENT

TYPE OF PAYMENT	NO OF PAYMENTS	AMOUNT OF PAYMENTS	PER CENT OF TOTAL AMOUNT	AVERAGE PAYMENT

August Payments Bring All-time Total to \$7,642,451.08

With the inclusion of the \$907,552.84, which was paid to claimants during August, the total of benefit payments for the nineteen month period during which such payments have been made in Florida was brought to \$7,642,451.08. The amount already disbursed during 1940 (\$4,138,338.63) equals 54.1% of the all-time total.

Private Placements Increase 39% over July

The placement figure for the month of August passed the 3,000 mark for the first time since January, 1940. There were 3,548 placements reported during the month. The Tampa office had the largest volume of placements with 516, although only 272 of these were private placements. Jacksonville with 510 complete placements reported the second largest volume, followed by Miami with 426. The 418 private placements included in the Miami figure represent the largest volume of private placement activity for the month. There was also a noticeable increase in private placements in the Bradenton, Arcadia, Lakeland and Leesburg areas over previous periods. Private placement activities fell considerably at Fort Lauderdale, Fort Pierce, Key West, Marianna and Panama City. Of the 2,420 private placements made during the month, 1,744 were in regular employment. This means that 1,744 applicants found employment in private industry during the month that would last more than thirty days.

There was an increase in public placement activity as compared with previous months. The biggest increase took place in the Tampa office where 244 public placements were reported during August. These placements were made through referrals to projects authorized in connection with the National Defense Program in that area. Jacksonville reported 188 public placements, the majority of which were made in connection with the naval air base project there. The 152 public placements reported by Leesburg are accounted for in the various highway projects and other public construction work in that section of the State.

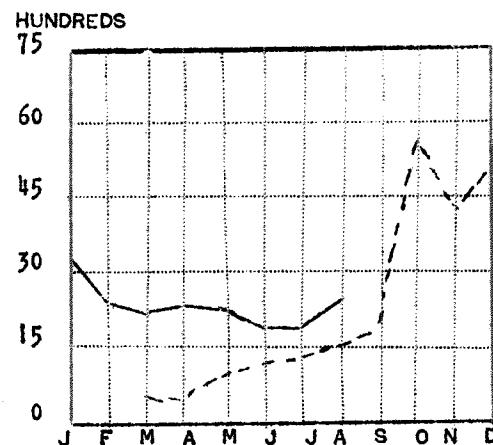

There was a slight increase in field visiting activities during August as compared with July, with the largest number of visits being reported by the Lakeland office. This office reports 67 visits to employers for the purpose of promoting the use of the public employment service.

BROKEN LINE -- 1939

New Applications and Active File Drop

The number of new applications taken during the month of August fell 8.6% below the figure reported during the previous month. There were 9,087 new applications taken during the month. Of this figure 1,589 were reported by the Miami office and 1,336 by the Jacksonville office. Orlando reported the third largest figure with 985, followed by Tampa with 945 and West Palm Beach, 736. The August, 1940, figure for new applications fell 10.4% below the figure for the same month of 1939.

The drop of 14.9% in the active file from the previous month is accounted for largely by the action taken in the Jacksonville and Tampa offices in removing many applications from their active files. This action was taken either because registrations had become inactive due to the thirty day limit or because it was known that many of the applicants represented by these registrations were not currently available for referrals to job openings.

On August 31, Miami with 10,432 active registrations had the largest volume of applicants seeking employment. The Jacksonville office figure dropped 60% to a total of 5,728 as compared with more than 14,000 applications which were reported in the files at the end of July. The Tampa office with 6,575 active registrations had the second largest active file in the State at the end of the month. There was a drop of 33.5% in the Arcadia file due also to action taken by that office to remove applications of persons who could not be considered as currently available for referral. The increase of 79.9% shown in the active file for Tallahassee is due largely to the transfer of all registrations of applicants in the area formerly served by Lake City from the Jacksonville to the Tallahassee office. These registrations represent job seekers in the counties of Columbia, Hamilton, Lafayette, Suwannee and Taylor.

INITIAL DETERMINATIONS*

The total number of initial determinations made during August amounted to less than 50% of the July total for this activity. The July total was 21,950 - the August total 10,587.

There was a 2.29% decrease in the ratio of initial determinations allowing eligibility to total dispositions bringing this percentage from 54.93 in July to 52.64 in August. This was the lowest percentage of determinations allowing eligibility since the all-time low of 45.77% which was experienced during May 1940.

The reason for the sharp drop in the number of initial determinations made during August was the 57% drop in the number of initial claims made during that month. All initial determinations are made on the basis of initial claims received. The number of these claims received during August constituted a drop of 11,450 from the 20,092 initial claims (Florida and liable state claims) received during July.

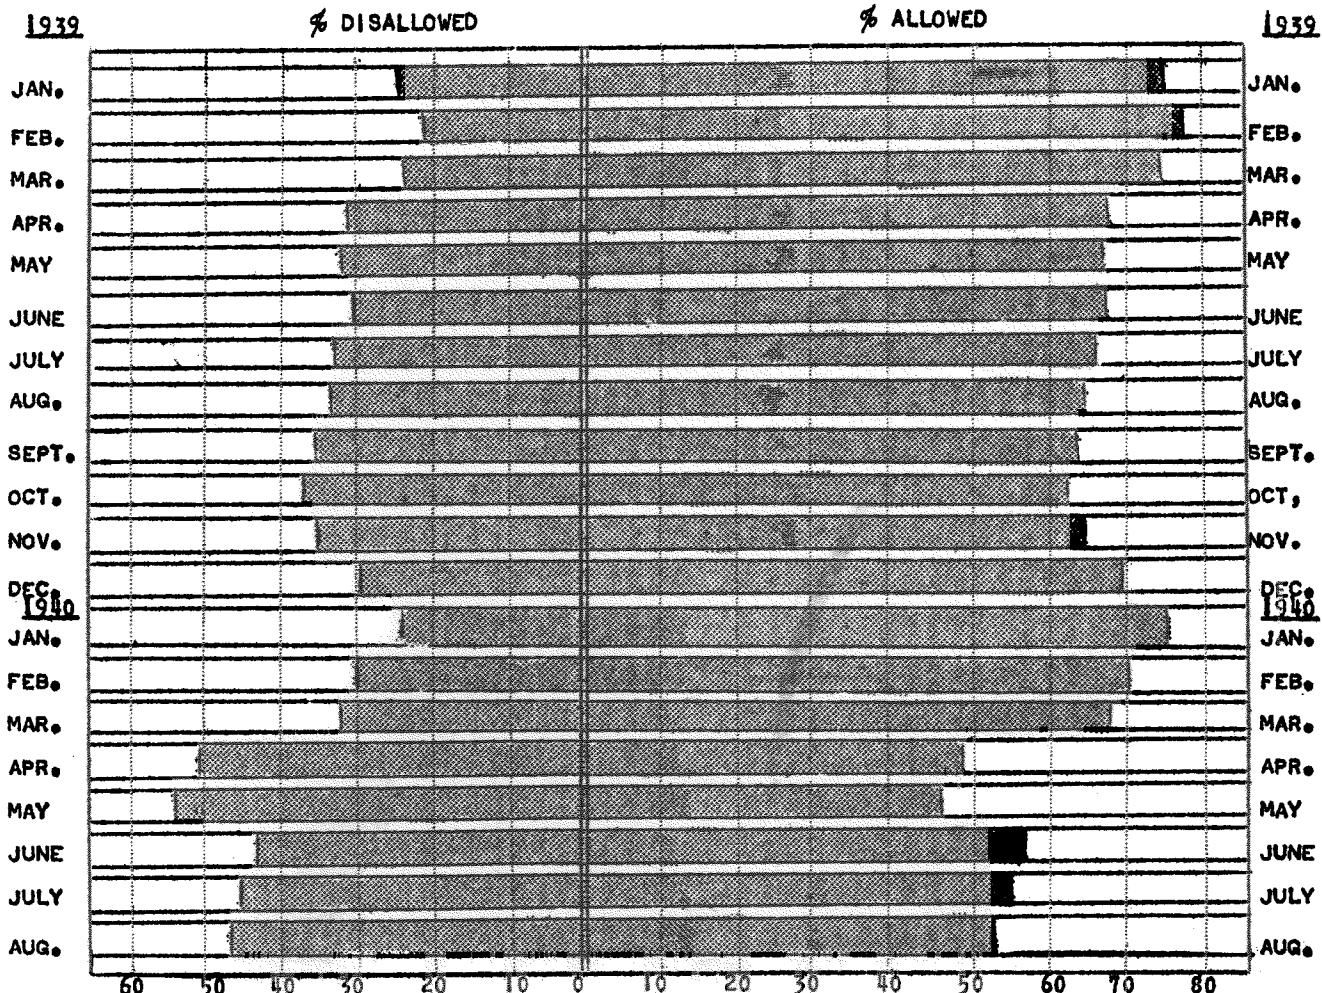

In August 1939 65.06% of the 18,842 initial claims filed were determined to be eligible.

*Initial determinations are original decisions on a claimant's eligibility to receive benefit payments. These decisions are based on the initial claim for benefits which the claimant files on his first visit, after his separation from his job, to an office of the Florida State Employment Service or, in the case of a person filing a liable state claim, to an office of the State Employment Service of the state in which he is residing at the time of filing claim. If the claimant is otherwise eligible for unemployment compensation, he will be determined eligible if his earnings are sufficient. If he is determined to be ineligible, it will be for one of three reasons:

1. No Wage Records - no records of claimant's having earned wages in covered employment.
2. Insufficient Wage Credits - some earnings in covered employment, but not enough to fulfill the requirements of the Law.
3. Other Reasons - few claims fall in this class; most of those being so classified because the claimant has filed a prior claim, etc.

INITIAL CLAIMS

The number of initial claims filed in Florida during August dropped 56.7% from the July total of 20,092 to equal 8,694. Every local office in the State reported fewer original claims for August than July, indicating a fall in the number of benefit payments during September and probably during the remaining months of 1940 for each local office area as well as the State as a whole.

Largely responsible for the decrease in initial claims was the fact that although, in general, business conditions had not improved, the various industries throughout the State reached their low point during June and July and continued to operate without further extensive layoffs. The number of initial claims filed does not indicate the total amount of unemployment at any given time but merely the recent fluctuations in unemployment.

The August 1940 total of initial claims constituted a 26.4% decrease from the August 1939 total for this type of claim (see column at extreme right of the table given at the bottom of this page).

WAITING PERIOD AND CONTINUED CLAIMS

Waiting period and continued claims (combined) during August totalled 111,862 a drop of 30.7% from the 161,522 total for these types of claims during August 1939. Although the decrease was generally scattered among the local offices there were, however, two offices, Ocala and St. Petersburg, which showed increases over August of last year.

Daytona Beach showed the heaviest percentage decrease as the claim load for that area dropped 55%. Winter Haven accounted for the largest numerical decrease as claims in that area fell from 27,496 in August 1939 to 13,540 in August 1940 - a drop of 13,956.

The decrease of August from the preceding month (July 1940) was far less than that discussed in the above paragraphs - amounting to only 6.4%. This percentage decrease was not at all consistent in the several local office areas in the State. The Tampa office showed a decrease of 14.8% while Ocala increased 28.6%. Eleven offices recorded increases and thirteen experienced decreases to bring about the decrease of 7,677 from the July total of 119,539 to the August figure of 111,862.

AGENT STATE CLAIMS*

Claimants seeking unemployment compensation on the basis of wages earned in states other than Florida filed 1,018 IB-1's and 8,201 IB-2's during August. These claims were filed in offices of the Florida State Employment Service and transmitted to the state in which the basic wages were earned; that state making the ultimate determination of eligibility or ineligibility, amount of benefits to be paid, etc.

IB-1'S

The Miami area, with 38.81% of the State total, led by a wide margin in the number of agent state initial claims filed during August. Jacksonville, Tampa, St. Petersburg and Pensacola each accounted for more than 6% of the total with the other local offices accounting for the remainder.

IB-2'S

The 8,201 agent state continued claims filed in the State during August were distributed in much the same manner as were the IB-1's. Miami again led, this time with 36.80% of the total, while Jacksonville, Tampa, St. Petersburg and Pensacola took the next places, respectively. Note that the five offices mentioned in each type of claim appeared in the same order under each classification.

* AGENT STATE CLAIMS ARE OF TWO TYPES: IB-1'S, WHICH ARE INITIAL OR ORIGINAL CLAIMS AND IB-2'S, WHICH ARE EITHER WAITING PERIOD OR CONTINUED (COMPENSABLE) CLAIMS.

Construction Industry Continues to Dominate Applicant Hiring

The construction industry, for the third consecutive month, lead all other industries during August in the number of jobs given to applicants referred by the public employment offices. This industry accounted for 1,304 or approximately 35% of the total number of placements made during the month. More than 1,200 of these placements were in regular employment. There were 146 claimants among the applicants finding jobs in the construction industry. The various projects throughout the State which have come about as a result of the National Defense Program are largely responsible for the predominance of job openings in this industry.

With the opening of box and crate mills in the agricultural and citrus packing areas the manufacturing industry group moved up to replace domestic service with the second largest volume of jobs filled with applicants from the employment offices. Accounting for a total of 793 applicant placements the manufacturing industry put to work 526 applicants who were claimants for unemployment compensation benefits. This was by far the largest representation of claimant-applicants placed. The expansion of placement activity in these two industrial groups was responsible for an increase in total placements beyond the 3,000 mark for the first time since January.

Physical Labor Workers Predominant

Due almost entirely to the increasing activity in the construction industry, applicants classified as physical labor workers continued to find jobs more readily than those in other occupational groups. There were 1,621 of these unskilled laborers who found jobs during August. This figure represented 45.7% of the total applicants placed by the employment offices during the period.

The 847 service workers placed represented the second largest group with respect to occupational classification. The majority of these workers fell under the personal domestic worker group.

Production workers, representing the third largest occupational group of applicants placed, accounted for 442 or 12.5% of the total placements. The majority of these represent manual labor in semi-skilled occupations.

There were 27 applicants placed who fell under the professional and kindred classification. Administrative and supervisory workers accounted for 12 and technicians for 5 of these placements. Other placements included 198 clerical workers, 294 skilled craftsmen and 119 salespersons.

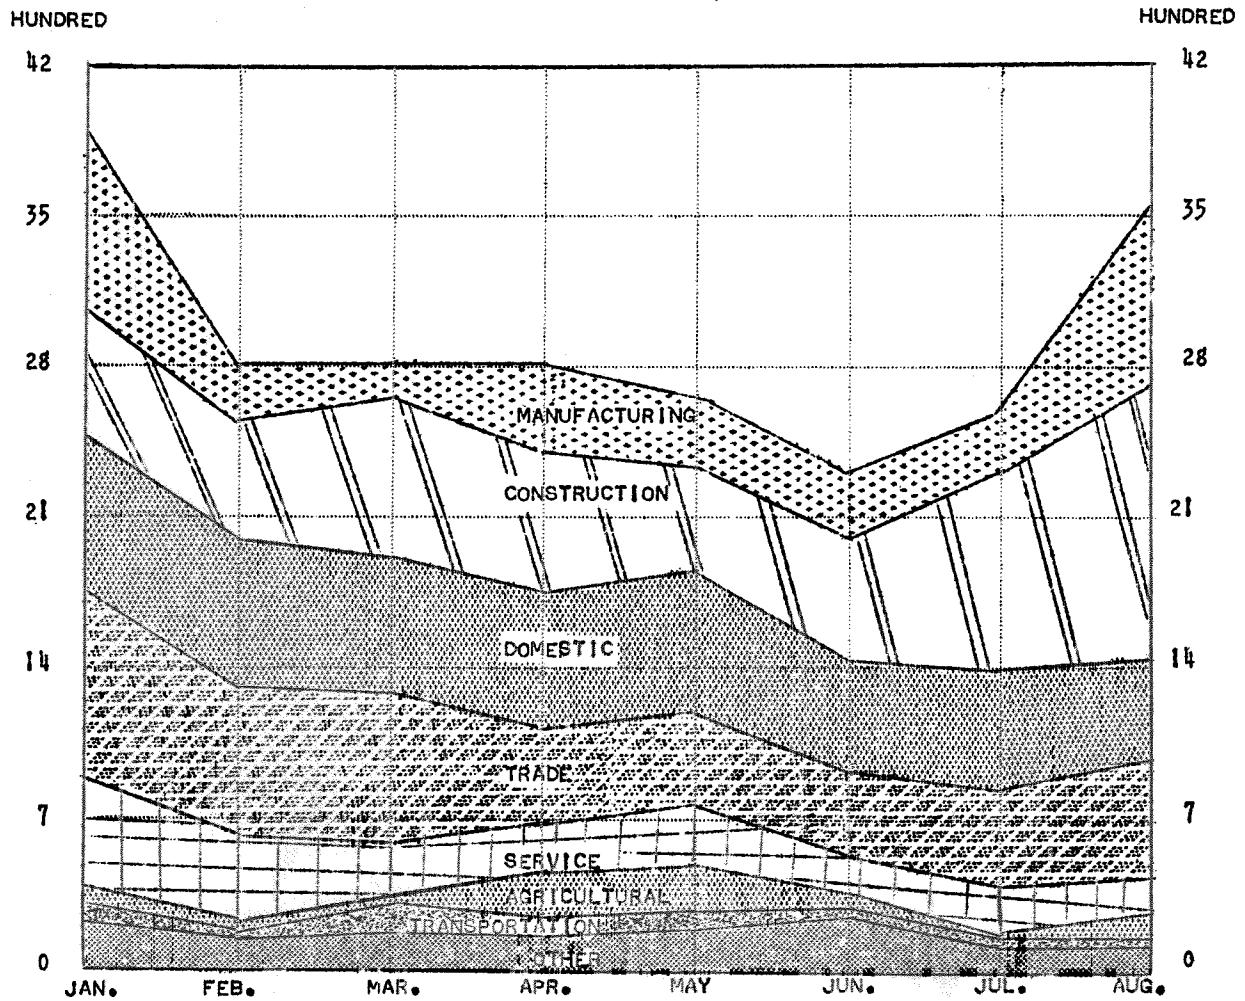

Median Age Group Moves to 25 - 29

The largest group of applicants in any five year age group were those between 25 and 29 years inclusive. This group accounted for 679 of the total placements. This figure was slightly larger than the 650 representing group 20 to 24 which has been the larger during previous months.

**AGE DISTRIBUTION OF PLACEMENTS
AUGUST 1940**

1,106 Veteran Applications Canceled During August

The registration cards of 1,106 veterans were removed from the active file through cancellation procedures during the month. This action was taken by several offices in an effort to clear the active files of the applications of persons who were found not to be currently available for referral to job openings. Many of the cards had lost their active status due to the sixty day validity period during which the applicant must report to the office in order to have a registration retained in the active file.

On August 31 there were 562 veterans actively seeking employment through the Miami office. The Pensacola office had the second largest veteran representation with 311 followed by Tampa with 274 and Jacksonville with 264.

There were 352 new veteran applications taken during the month. Miami reported more than any other office with 74 followed by Jacksonville where 66 new applications were filed.

There were 96 veterans among those applicants for whom the service found jobs during the month. Seventy-five of these jobs filled were in private employment. Miami made the most veteran placements reporting 22 with all but one of these being private. Jacksonville reported 19 and Tampa 18 veteran placements.

Approximately 45% of the veteran cancellations were made in the Jacksonville office where 462 veteran registrations were made inactive for one reason or another. Miami, reported 176 cancellations, St. Petersburg 145 and Tampa 112.

* REVISED TO JULY 31, 1940

CHANGES IN STATUS OF THE FLORIDA UNEMPLOYMENT COMPENSATION FUND DURING 1939 - 1940
 (BENEFITS FIRST PAYABLE FEBRUARY 1, 1939)

MILLIONS
 OF DOLLARS

EXPLANATION OF GRAPH:

1. THE DARK RECTANGLE FORMING THE BASE FOR THE REST OF THE CHART REPRESENTS THE COLLECTIONS WHICH WENT INTO THE FUND DURING 1937 AND 1938. THERE WERE NO BENEFIT PAYMENTS DURING THIS PERIOD.
2. THE SHADED AREA (JUST ABOVE THE FUND BALANCE) REPRESENTS THE CUMULATIVE EXCESS OF COLLECTIONS OVER BENEFIT PAYMENTS.
3. THE LIGHT PORTION (AT THE TOP) REPRESENTS THE AMOUNT PAID OUT IN BENEFITS. AT FIRST GLANCE IT MIGHT SEEM THAT THE BALANCE IN THE FUND AMOUNTS TO ABOUT 18 MILLION DOLLARS; CLOSER SCRUTINY WILL REVEAL THAT THIS IS ACTUALLY THE TOTAL AMOUNT COLLECTED. FROM THESE COLLECTIONS MUST BE DEDUCTED BENEFIT PAYMENTS, IN ORDER TO ARRIVE AT THE NET BALANCE IN THE FUND.

FIELD SERVICE ACTIVITIES

At the beginning of August there were 6,708 employers who were considered as "liable". During the month 159 additional employers were found to be liable and 5 others chose to be brought under the act (liable by voluntary election) bringing the total number of liable employers to 6,872. From this total were deducted 221 firms which had ceased to be considered as liable, leaving 6,651 liable employers at the end of August. Of these 6,651 employers, 5,954 were liable under the Act and 697 were intrinsically liable.

APPEAL TRIBUNAL ACTIVITIES

During the first eight months of 1940 there have been 430 appeals filed by claimants for unemployment compensation, or recent employers of such claimants, who feel that under the Law their best interests will not be served if the decision of the Claims Deputy is accepted. The Law provides that any claimant or covered employer who feels that he has not received full consideration may take his case to the Appeal Tribunal where he may be heard and accorded a decision without necessary cost to either party.

Of the total number of appeals filed during 1940, more than one-half (225) have been instigated by conflicts over the amount of wages reported by the employer to the Commission. Appeals of this type are usually filed by the claimant, who alleges that his full earnings have not been reported by the employer or employers.

Second to wage record conflicts as a reason for appeals are cases of discharge for misconduct. Appeals of this type are usually made by employers who have discharged claimants previous to their filing claims for benefits. A claimant who has been discharged for misconduct in connection with his employment may be required to serve as many as seven weeks of disqualification in addition to the regular waiting period weeks and may have his maximum benefit amount decreased by not more than three times his weekly benefit amount. A total of 64 cases in this category have resulted in the filing of appeals since January 1, 1940.

Cases in which the employer feels that the claimant has left suitable employment without good cause (voluntary leaving) have accounted for 61 of the 1940 total of 430 appeals filed. In most cases of this type the claimant feels that he was justified in leaving his employment due to working conditions or other causes. (Labor disputes, strikes, walkouts, etc., are not placed in this group).

Next in numerical importance are appeals arising from labor disputes. This type of case has not actually been a source of great importance in the instigation of appeals, practically all of the 39 cases in this category having been filed during one month as a result of a strike in a pulp mill.

Fairly consistent from month to month has been the number of appeals under "availability". Cases of this type result from questions as to whether or not the claimant is available for work at the time of and subsequent to filing his claim.

Cases involving the suitability of work offered, technicalities of filing claims and making registrations accounted for a total of 19 appeals. Each of these constitutes so small a percent of the total number of cases as to warrant scant comment. "Suitable work" has reference to employment offered a claimant which such claimant does not consider to be suitable to his skill or previous experience.

Number of Appeals Pending Disposal August 31, 1940	110	114

APPEAL TRIBUNAL DECISION

The following is another in a series of actual cases taken from the files of the Appeal Tribunal of the Commission. In this instance the claimant had been determined not eligible because of lack of qualifying earnings.

CONTENTIONS OF THE PARTIES:

Claimant contended that he was in the employment of this employer as an electrician and mechanic, and that his wages earned after January 1, 1940, should have been reported. The employer contended that claimant's employment was exempt as agricultural labor after January 1, 1940.

FINDINGS OF FACT:

Claim was filed July 1, 1940, and initial determination made July 8, 1940, from which claimant appealed.

The employer operates a packing house where citrus fruits are graded and packed. It listed claimant's wages on its wage reports to the Unemployment Compensation Division for the first, second, and fourth quarters of 1939, but did not report wages paid claimant after January 1, 1940.

Claimant testified that he was employed by this employer as an electrician and mechanic, and that he not only served in this capacity during 1939 but also in 1940 until May 25, being paid \$25.00 a week. He offered in evidence a letter of recommendation signed by this employer, dated May 25, 1940, stating in part as follows:

"This is to certify that Mr. _____ has been in our employ in the capacity of electrician and mechanic for the past two years."

The representative of the employer acknowledged claimant's employment as a mechanic and agreed to file supplemental wage reports for the first and second quarters of 1940 listing the wages paid claimant.

From the evidence the referee finds that claimant's earnings in this employment since January 1, 1940, are as follows:

First quarter of 1940	\$325.00
Second quarter of 1940	200.00

REASONS FOR DECISION:

Section 3-E-VI of the Florida Unemployment Compensation Law reads in part as follows:

"VI. The term 'employment' shall not include
"(a) Agricultural labor;"

The Act does not contain a definition of the term "agricultural labor", nor has the Commission by regulation attempted to define the term. However, attributing to the term its colloquial meaning, the Referee is of the opinion that service performed by an electrician and mechanic in tending and repairing the machinery in a commercial citrus packing house is not "agricultural labor" within the meaning of said Section 3-E-VI of the Act.

Section 5-E of the Florida Unemployment Compensation Law provides that an unemployed individual shall be eligible to receive benefits only if the Commission finds that he has during his base period earned wages for insured work equal to not less than a specified amount. The addition of the claimant's earnings in the first quarter of 1940 to those listed on his wage transcript make a total in excess of the amount required to make claimant eligible for benefits.

DECISION:

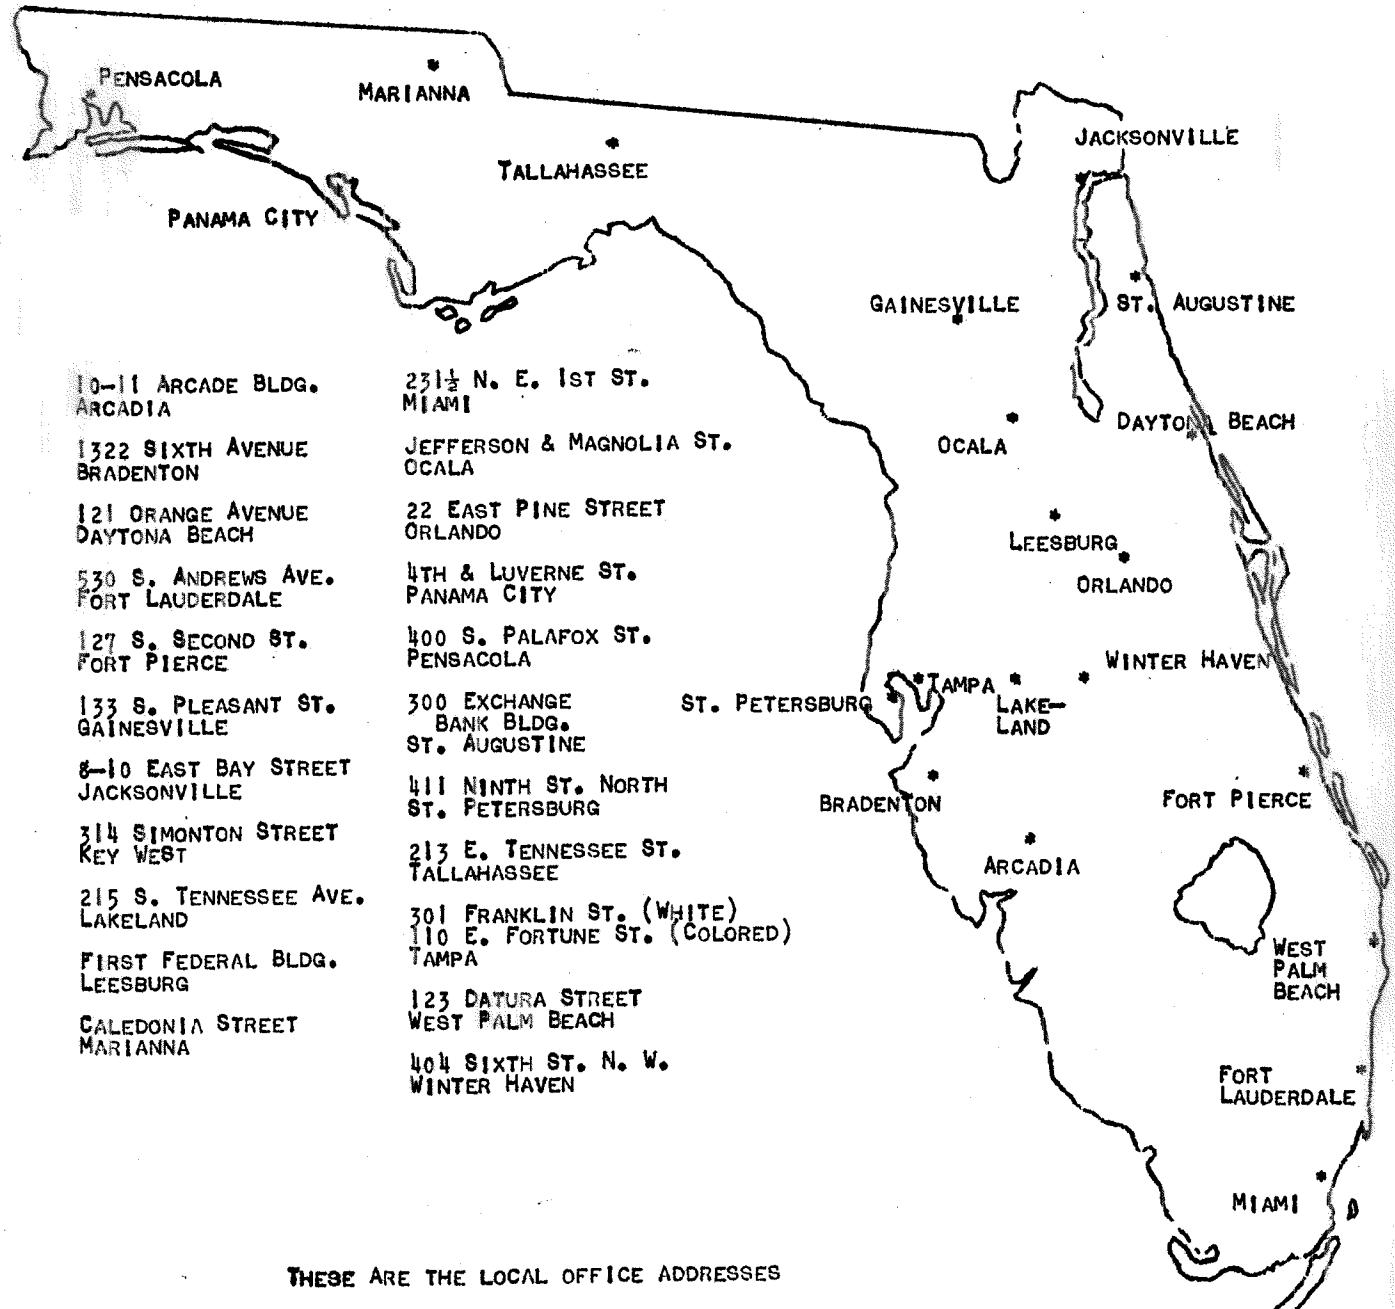

The decision of the deputy holding claimant not eligible because of lack of qualifying earnings is hereby reversed, and it is ordered that the wages listed in the Findings of Fact be credited to claimant's Social Security account number and that his claim be redetermined on the basis of such additional earnings, which are sufficient to make him eligible for benefits. It is further held that the employer is liable for contributions on such wages.
